

# Secured File Exchange

## Highlights

- Send and receive files of any size
- Reduce email server load
- Save bandwidth
- Corporate governance compliance
- Hassle-free deployment
- Easy administration
- Secured transmission of documents

## Specifications

Minimum Server requirements:

- OS: Windows 2003 Server
- RAM: 2 GB (min)
- Disk Space: 1 GB (min)
- IIS 6.0
- Microsoft .NET Framework 2.0
- Microsoft SQL Express 2005

## Client site support

- Microsoft Outlook 2002, 2003, 2007 and 2010
- Internet Explorer, Firefox, Safari, Chrome and Opera
- Java is 1.5.0

## 1. Send and receive large files easily

- JustAttach resolves email attachment issues including imposed email attachment sizes, storage limitations, security and corporate governance.
- JustAttach enables the authorized user to send big attachments or folders without the need to break them into smaller files or choke the mailbox.
- JustAttach allows the authorized user to receive big files from external party by inviting them, via email, to upload the files to their JustAttach account

## 2. Security

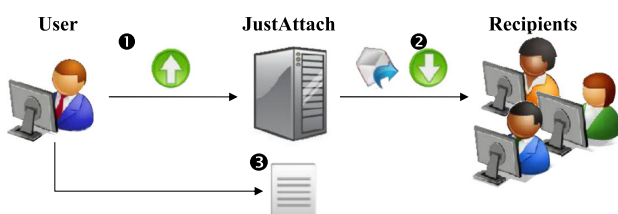

- Security worries are put to rest when leveraging on its built-in security and corporate governance features. File in transmission and in storage is encrypted.
- Confidential information management feature allows corporate policy enforcers to block or delete confidential material from being sent out to unauthorized parties.
- Simple and yet secured mechanisms to ensure only the targeted recipients can access to the attachment.

## 3. Hassle free deployment

- Software agent is not required on users' local machines, all they need is a web browser. Optional plugin is available for Outlook users.

## 4. Easy administration

- Automated file storage, system management and account provisioning features help JustAttach to be self-managed by users.

### Sending Big Files

- User uploads file to JustAttach.
- JustAttach sends message to recipients. Message contains:
  - Download Link (recipient clicks to download file).
  - Upload Link (recipient clicks to upload file to user).
- User easily tracks who has download the file from download logs.

### Receiving Big Files

- Recipient clicks Upload Link to upload file to user.
- JustAttach sends message to user. Message contains:
  - Download Link (user clicks to download file).
